

CAREER RECOMMENDATION SYSTEM USING MACHINE LEARNING:

1. User Authentication and Login: At first, we created a web page for users.
2. Users can register on the page with their unique name, password, and email.
3. After registration, it redirects to the login page. They can log in with their own credentials.
4. After logging in, they can upload their resume to the portal.
5. Keywords from the resume are extracted using feature extraction.
6. Then, user interests are predicted.
7. Based on their interests, job recommendations are provided without consuming much time.
